

## URC online engagement with children and young people RISK ASSESSMENT TOOL

Online risk can be classified in four ways:

- Content risk: children receiving mass-distributed content. This may expose them to age-inappropriate material such as pornography, extreme violence, or content involving hate speech and radicalisation.
- Conduct risk: children participating in an interactive situation. This includes bullying, sexting, harassing, being aggressive or stalking; or promoting harmful behaviour such as self-harm, suicide, pro-anorexia, bulimia, illegal drug use or imitating dangerous behaviour. A child's own conduct online can also make them vulnerable - for example, by over-sharing their personal information or by harassing or bullying themselves.
- Contact risk: children being victims of interactive situations. This includes being bullied, harassed or stalked; meeting strangers; threats to privacy, identity and reputation (for example, through embarrassing photos shared without permission, a house location being identified, someone impersonating a user, users sharing information with strangers); and violence, threats and abuse directly aimed at individual users and/or groups of users.
- Grooming risk: children being victims of grooming through engaging with interactive situations, sharing information and building contact with predatory others who then move the relationship to another context in order to exploit the child.

## Child Development Chart

(from Child Safety Online: a practical guide for providers of social media and interactive services by UK Council for Internet Safety)

### How children and their attitude to risks evolve throughout childhood.

This chart summarises the development of children at various ages from 3 to 18: how they see themselves, their priorities, their behaviour online and their attitude towards risk.

Source: Dr. Angharad Rudkin, Chartered Clinical Psychologist, University of Southampton

<i>3-5 year olds</i>		
<i>Overall development</i>	<i>Key online activities</i>	<i>Attitudes to risk</i>
<p>They can put themselves in others' shoes, but they are still quite fooled by appearances.</p> <p>Beginning to learn that there are social rules to follow.</p> <p>Starting to build up friendships but peer pressure remains low.</p>	<p>Entertainment, particularly games and TV.</p>	<p>They may be unaware of risks.</p>

<i>6-9 year olds</i>		
<i>Overall development</i>	<i>Key online activities</i>	<i>Attitudes to risk</i>
<p>Play is mainly pretend/role-play, moving towards greater rule-based reality play. Becoming socially more sophisticated; the need to fit in and be accepted by the peer group becomes more important.</p> <p>Learning how to manage their thinking and their emotions. Learning about the complexities of relationships; if they can't manage these it can lead to alienation, bullying and loneliness. At around 7, they undergo a significant shift in thinking to more order and logic.</p> <p>They are now frequent users of the internet but with limited information on staying safe online, which may make them vulnerable.</p>	<p>Entertainment and fun – games, films, TV, video.</p> <p>Communications largely with family only</p>	<p>Children largely compliant with messages from school/home – although if risks aren't explained clearly, they imagine their own explanations.</p>

<i>10-13 year olds</i>		
<i>Overall development</i>	<i>Key online activities</i>	<i>Attitudes to risk</i>
<p>Moving towards more adult ways of thinking but still not making decisions the way adults would.</p> <p>Very aware of social pressure and expectations; will change aspects of themselves in order to fit in and be accepted by peers. Friends are becoming more important.</p> <p>More aware of what's 'cool' or not, including brands.</p> <p>Girls show a decrease in self-esteem as they compare themselves to others around them.</p>	<p>Communications with friends; games (for boys), gossip, TV/films, shopping.</p> <p>Open communication across a range of sites.</p> <p>Visual communication becomes key.</p> <p>Development and honing of self-image.</p>	<p>Developmentally, the strong desire for immediate rewards triggers risk-taking behaviour.</p>

## URC online engagement with children and young people RISK ASSESSMENT TOOL

<i>14-18 year olds</i>		
<i>Overall development</i>	<i>Key online activities</i>	<i>Attitudes to risk</i>
<p>Undergoing significant neuro-psychological changes, leading to differences in the way they perceive emotions and make decisions. Developments in the pre-frontal cortex may contribute to the increase in risk-taking behaviour seen during adolescence.</p> <p>Mental health difficulties such as anxiety and depression can intensify.</p> <p>Still have difficulties realising that others can have a different perspective, so may find it hard to work out interpersonal problems.</p> <p>Adolescence is a time characterised by idealism, with a tendency towards all-or-nothing thinking.</p> <p>Highly dependent on peers for a sense of well-being. They need to feel as if they are part of a group - yet also want to be viewed as unique.</p> <p>Can appear to shun adult influence but still require clear boundaries and support from parents and teachers.</p>	<p>Communications with friends; games (for boys), gossip, TV/films, shopping.</p> <p>Open communication across a range of sites.</p> <p>Visual communication now vital and the 'currency' of likes and ratings is very important.</p>	<p>More settled within peer groups.</p> <p>Beginning to get better at the risk/reward equation.</p>

## Risk Assessment: Online engagement with children and young people

### CHURCH:

**Activity:** Online communication

**Location:** Online

**Name of leader with responsibility:**
